Information for Editors

To have a new guideline automatically listed above be sure to label it *env* and *recommen dation*.

Rules vs. Recommendations

This coding standard consists of *rules* and *recom mendations*, collectively referred to as *guidelines*. Rules are meant to provide normative requirements for code, whereas recommendations are meant to provide guidance that, when followed, should improve the safety, reliability, and security of software systems. [Learn more](#) about the differences.

Risk Assessment Summary

| Rule | Severity | Likelihood | Remediation Cost | Priority | Level |
|-----------|----------|------------|------------------|----------|-------|
| ENV00-CPP | low | unlikely | medium | P2 | L3 |
| ENV01-CPP | high | likely | high | P9 | L2 |
| ENV02-CPP | high | probable | medium | P12 | L1 |
