SEI CERT C++ Coding Standard

The C++ rules and recommendations in this wiki are a work in progress and reflect the current thinking of the secure coding community. Because this is a development website, many pages are incomplete or contain errors. As rules and recommendations mature, they are published in report or book form as official releases. These releases are issued as dictated by the needs and interests of the secure software development community.

The CERT C++ Coding Standard does not currently expose any recommendations; all C++ recommendations have been removed (moved to The Void section) due to quality concerns pending further review and development.

Page: Tool Selection and Validation
Page: System Qualities
Page: Scope
Page: Rules Versus Recommendations
Page: Relation to the CERT C Coding Standard
Page: Introduction
Page: How this Coding Standard Is Organized
Page: Government Regulations
Page: Development Process
Page: Conformance Testing
Page: Automatically Generated Code
Page: Automated Detection
Page: Audience
Page: Acknowledgments

Rules

Page: Rule 01. Declarations and Initialization (DCL)
Page: Rule 02. Expressions (EXP)
Page: Rule 03. Integers (INT)
Page: Rule 04. Containers (CTR)
Page: Rule 05. Characters and Strings (STR)
Page: Rule 06. Memory Management (MEM)
Page: Rule 07. Input Output (FIO)
Page: Rule 08. Exceptions and Error Handling (ERR)
Page: Rule 09. Object Oriented Programming (OOP)
Page: Rule 10. Concurrency (CON)
Page: Rule 49. Miscellaneous (MSC)
Secure C++

Coding Books and Downloads

The CERT C++ Coding Standard, 2016 Edition provides rules to help programmers ensure that their C++ code reduces security flaws by following secure coding best practices. It is downloadable as a PDF. (errata)

The CERT C Coding Standard references and relies on the CERT C Coding Standard. The CERT C Coding Standard, 2016 Edition provides rules to help programmers ensure that their code complies with the new C11 standard and earlier standards, including C99. It is downloadable as a PDF. (errata)

Secure Coding in C and C++ identifies the root causes of today's most widespread software vulnerabilities, shows how they can be exploited, reviews the potential consequences, and presents secure alternatives.

If you have questions about this wiki, have recommendations for standards in development, or want to request privileges to participate in standards development, contact us! We acknowledge the contributions of the following folks, and we look forward to seeing your name here as well.

---

**Rules vs. Recommendations**

This coding standard consists of *rules* and *recommendations*, collectively referred to as *guidelines*. Rules are meant to provide normative requirements for code, whereas recommendations are meant to provide guidance that, when followed, should improve the safety, reliability, and security of software systems. Learn more about the differences.

**Information for Editors**

- To eliminate a section from the lists above, label it `section` and `void`.
- To have a section listed as a recommendation, label it `section` and `recommendation`.
- To have a section listed as a rule, label it `section` and `rule`.
